CARGO CART

Successful Makerspaces and STEM Labs require access to a broad range of materials and resources to foster learning through inquiry. The Explorer Cargo Cart by Haskell is the perfect support solution to our Rover Table and our Maker Table allowing easy access to all the many different maker manipulatives needed. Its ease of mobility allows for easy access to any area of the classroom where maker activities happen or it can follow its companion the Rover Table from room to room.
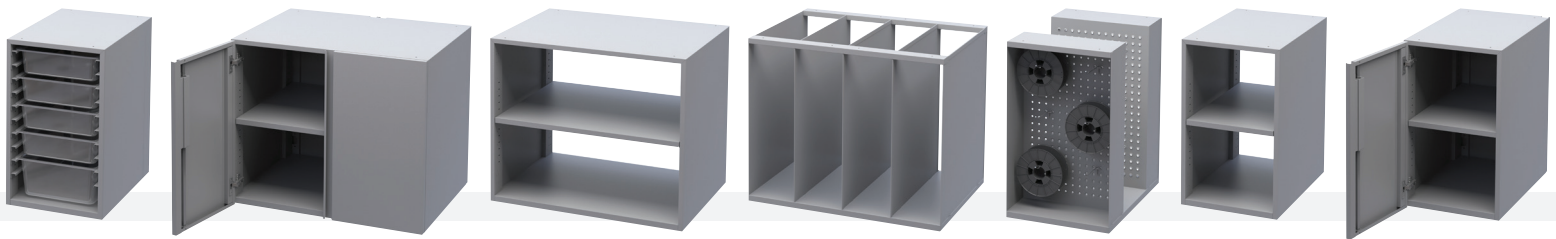

MAKE YOUR OWN CARGO CART

The universal frame design allows the Cargo Cart to be configured with multiple storage and top configurations depending on the curriculum needs. The Cargo Cart can accommodate many different types of materials from craft paper, makers, crayons, modeling clay, Legos to more complex items like 3D printing spools, poster boards, and large pieces of wood. Our standard butcher block top adds to the durability of this cart and comes either in a 2/3 length to work with the open format storage or with a full top to support additional equipment.

UNLIMITED STORAGE OPTIONS

The Cargo Cart frame is designed to accommodate multiple storage options. There are 7 different all metal storage modules that can be specified individually or in combination to create your own unique storage solution. All of the modules can be accessed from both sides of the cart making the configuration process simple and easy. In addition to bin storage, peg board storage and large format / materials bin, two sizes of open shelving can be specified. Locking door kits can be added to the open shelving for added security.

DURABILITY AND MOBILITY

The Cargo Cart is constructed with an all metal welded frame for a life time of use, a hallmark of Haskell design and construction. With its durable locking casters and standard butcher block top, the Cargo Cart is perfect for active learning environments that require flexibility for multiple types of maker experiences. As part of the Explorer suite of solutions, the Cargo Cart easily supports dedicated and mobile makerspace environments and works seamlessly in any of todays collaboratieve learning spaces.
